Mendon Outfalls: Source - Mendon Building Dept., 10.12.22

*from General Permit*

**Outfall** - is defined as any point where a municipally owned and operated separate storm sewer system discharges to either surface waters of the State or to another MS4. Outfalls include discharges from pipes, ditches, swales, and other points of concentrated flow. However, areas of non-concentrated (sheet) flow which drain to surface waters of the State or to another MS4 system are not considered outfalls and should not be identified as such on the system map.
